SPHAERODACTYLU S ARGUS (Jamaican Stippled Sphaero). CUBA: HAVANA: MUNICIPALITY OF PLAZA DE LA REVOLUCIÓN: grounds of the “La Edad de Oro” zoo (23.11014°N, 82.39540°W; WGS 84), 12 February 2015. Ruben Marrero, Javier Torres, and Tomás M. Rodríguez-Cabrera. Verified by Orlando H. Garrido. Museum of Natural History “Felipe Poyé”, Faculty of Biology, University of Havana (MFP 12.583). First record for Havana Province and a 182 km range extension NW from the nearest published locality at Playa Girón, Ciénaga de Zapata, Matanzas province (Rodríguez and Rivalta 2007. Poeyana 495:8–13); other Cuban records are found in Rodríguez Schettino et al. (2013. Smithsonian. Herpetol. Inform. Serv. 14:1–96). The adult female was found during the day under a log within the zoo grounds. Specimen collected under the project “Colecciones zoológicas, su conservación y manejo II”, hosted by the Institute of Ecology and Systematics, Cuba.

**CHIRONIUS FLAVOPTICUS** (Sipo Keelback). PANAMA: LOS SANTOS: DISTRITO DE PEDASí: Pedasí (7.4574°N, 80.04835°W; WGS 84), 29 m elev. 11 September 2013. Margaret von Saenger. Verified by John G. Himes. Amphibian and Reptile Diversity Research Center, University of Texas at Arlington (UTADC 8600, 8601, photo vouchers). First record for Los Santos Province, located 91 km SE of the closest known locality at Reserva Forestal el Montuoso in Herrera province (Rodriguez et al. 2004 [2005]. In Garibaldi (ed.), Diversidad Biológica y Servicios Ambientales de los Fragmentos de Bosques en la Reserva Forestal El Montuoso, pp. 119–137. Universal Books, Ciudad de Panamá, Panamá). The snake was found less than 1 km from Los Destiladeros beach. We thank Patty Ruback for assistance with the GPS coordinates.
